**SELECTRADIO™ SOFTWARE TURNS SMARTPHONES INTO VARIETY-PACKED
UNIVERSAL RADIO RECEIVERS WITH ACCESS TO 5,000 CHANNELS**

**Users Get Live Internet and XM Radio Content Virtually Anytime, Anywhere, Curing
Playlist Fatigue; Demo at UTStarcom Booth #1106**

CTIA Wireless 2006, Las Vegas, NV Apr 05, 2006 – Users of leading smartphones, including the UTStarcom PPC6700, Palm Treo 700w, HP iPAQ hw6500 and Samsung i730, now can get live radio content from more than 5,000 Internet radio channels using a new version of [SelectRadio™](#) software. The available stream variety brings news, comedy, talk and millions of songs to users, surpassing the storage and other limitations of typical standalone music players.

CTIA attendees can try out SelectRadio software running on the latest UTStarcom smartphones at Booth #1106.

SelectRadio software uses the smartphones' network connection options to provide radio access on the go, in the office, or at home. For easy access to popular broadcasters, SelectRadio software includes pre-set channels from top broadcasters, such as Internet radio pioneer [radioio](#) (symbol:iwdm.pk), which this week announced it is approaching one million regular listeners; [XM Radio Online](#) (Nasdaq:XMSR); and [Shoutcast](#).

“The combination of SelectRadio software with the advanced 3G and WiFi connectivity we have designed into our latest Windows Mobile-based UTStarcom phones allows our customers to deliver a new type of music experience in a wider variety of mobile environments. We believe users will value a single device for both work and live audio entertainment needs,” said Matt Phillips, vice president of product development for [UTStarcom](#) (Nasdaq:UTSI).

SelectRadio software lets users search channels, using an advanced genre matching hierarchy or by matching terms to the station descriptions. Users can combine favorite channels into personal channel groups for easy access and create a “virtual dashboard” showing what’s playing across multiple channels, with one-touch access. With its patent-pending HyperScan™ technology, SelectRadio software automatically seeks favorite artists and can be set to skip specified artists. Users can easily access key functions for one-hand control of station scroll/select, volume/mute, and HyperScan artist list additions.

SelectRadio software is compatible with Intel XScale 270-series handheld phones and PDAs such as the latest Dell Axim* models, many HP iPaq* models and others with Microsoft Windows* Mobile 2003/WM 5.0 PPC or Phone Edition operating systems. For live listening, SelectRadio software requires a network connection via either the handheld wireless GPRS/EDGE, EVDO, or WiFi connection or through the USB ActiveSync connection to the desktop. SelectRadio software is priced at \$25 for a device-specific license. Customers using

licensed copies of SelectRadio v1.0 can upgrade the same device to v1.1 for free. A free 10-day fully functional trial is available for evaluation prior to purchase at www.selectradio.com.
